**0DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1,2,4,6,7,12-31,37-47 are rejected under 35 U.S.C. 102(e) as being anticipated by Paulraj et al (US 6,377,632).

Consider claims 1, 12,18,24,28,29, Referring to Fig.1, Paulraj et al discloses a delay diversity transmission method between a base station, having a plurality of antennas (114), and at least one remote receiver (not shown); comprising the steps/means (150 in Fig.3) of deriving versions of a signal with selected phase shifts, providing the derived signals to the plurality of antennas after providing a distinct delay (Delay 1 – P) to each of the derived signals. See col. 4, line 65-67 and col.5, lines 55-60. In particular regarding claim 28, the controller (120) executes “an algorithmic software” using the channel measurement data stored in the characteristic extractor/ “a data storage unit” for the functions mentioned above.

Regarding claim 2, see col. 5, lines 6-11 teaching receiving a feedback/ “uplink” signal from a remote receiver to provide a measurement of the channel quality between the transmitter and receiver.

Art Unit: 2634

Regarding claims 4,15,16,17, 21,22,25-27,37,38,42 and 45, the amplitude and/or phase of the transmission signal are determined so that each channel will have a desired channel communication signal amplitude.

Regarding claims 6,7,13,14,19,20 ,30,31,40,41,43,44, 46 and 47 see col.9, lines 45-48 teaching the signal being associated with CDMA and TDMA.

***Allowable Subject Matter***

3. Claims 3,5,23,39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 8-11,32-36 are allowed.

5. The following is a statement of reasons for the indication of allowable subject matter: No prior art has been found to disclose a multi-antenna transmitter where derived signals from each communication signal undergoes varying delays, i.e., delays determined based on uplink signals as well as phase shifts.
